

Scientific Horizons

We meet on the 2nd Wednesday of each month from 1.30pm to 3.30pm at a member's house in Birkdale to discuss Science.

Science is the study of the natural world through observation, experimentation and the testing of theories. It helps explain the natural phenomena we observe in our daily lives.

The group discusses how Science and Technology affect our lives; we learn about the latest scientific discoveries and how they are changing our understanding of the world.

Since our members attended school, our Scientific Horizons have expanded to include: artificial intelligence, black holes, chaos theory, climate change, computing, gene therapy, gravitational waves and the Internet, and has also seen dramatic developments in our knowledge of DNA & RNA, nuclear fusion, particle physics, tectonic plates etc.
